CHAMPION INTERBREED GROUP OF THREE

PART THREE CARCASS COMPETITION

Carcasses will be judged according to the Australian Beef Carcass Appraisal System (ABCAS) utilising the scientific principals of Meat Standards Australia (MSA). A more detailed description is available from RASWA upon request.

All exhibits will remain in the class to which they were assigned on the hoof i.e. a Lightweight exhibit will be judged as a Lightweight exhibit on the hook. However, carcasses will be judged depending on which carcass category they fall into which are determined by the Hot Standard Carcass Weight (HSCW) of the exhibit. Animals within an individual class may be judged across one or more carcass weight categories depending on the spread of carcass weights in that individual class. The fat requirements for each category are outlined in the table below. These will be the categories used for judging under the ABCAS system.

The ideal fat depths for carcasses in the Carcass Competition are as follows for the different HSCW categories:

Weight	P8	Rib fat
100.0 - 180.0kg	4 - 8mm	3 - 6mm
180.1 - 240.0kg	6 - 10mm	4 - 7mm
240.1 - 300.0kg	8 - 12mm	5 - 9mm
300.1 - 400.0kg	10 - 14mm	7 - 11mm

The measured fat depth of a carcass must fall within this range to gain maximum points.

Points allocation using ABCAS scoring system

1. Market specifications (20 points)

P8 fat depth	10
Meat colour	5
Fat distribution	5
Penalties*	As required

*A 5 point penalty will be applied if fat colour is greater than 3, if the animal exhibits blood splash or at the carcass Judge's discretion.

2. Saleable meat yield (35 points)

Rib fat depth	15
Eye muscle area	20

3. **MSA eating quality (combined, 45 points)

Ultimate meat pH - units	45 points combined ***
Ossification score 100 - 590	
Tropical breed content (TBC) 0 - 100%	
Hump height mm	
AUS-MEAT marbling 0 - 6	
MSA marbling 100 - 1190	
Sex - male or female	
Total	100

**To receive eating quality points, carcasses must meet the minimum MSA carcass specifications:

1. Minimum of 3mm of rib fat.
2. Adequate fat distribution.
3. pH of 5.70 or less.

Any carcasses which fail any of the above requirements will receive a score of 0/45 for eating quality

***Eating quality points are calculated using the predicted MSA eating quality scores of 35 cut by cook combinations (100 CMQ4 score points each) of economic importance in the carcass, giving a score out of 3500 and adjusted back to a score out of 45. *The eating quality score will be highest in carcasses with low TBC, no HGPs, low ossification and high marbling.*
